1, 新建 style 环境

2、 进入终端

- 3 pip install -i https://pypi.tuna.tsinghua.edu.cn/simple scipy matplotlib numpy Pillow requests flask flask-restful tensorflow==2.0.0b1
- 4、让 Jupyter Notebook 支持虚拟运行环境,需要在 Anaconda 里安装一个插件。

回到终端下面,用 C-c 退出目前正在运行的 Jupyter Notebook Server, 然后执行:

conda install nb_conda

再重新开启 Jupyter Notebook:

jupyter notebook

In [1]: # 测试安装是否成功 import tensorflow as tf tf. __version__

Out[1]: '2.0.0-beta1'
